

Dermal Roller SR™ is a precision engineered, hand-held medical device that helps combat the appearance of scars, wrinkles, uneven skin tone, stretch marks, cellulite and even hair loss. Micro skin needling encourages collagen and elastin production within the skin and helps to reduce the appearance of skin imperfections making the skin smoother, brighter, healthier and younger looking.

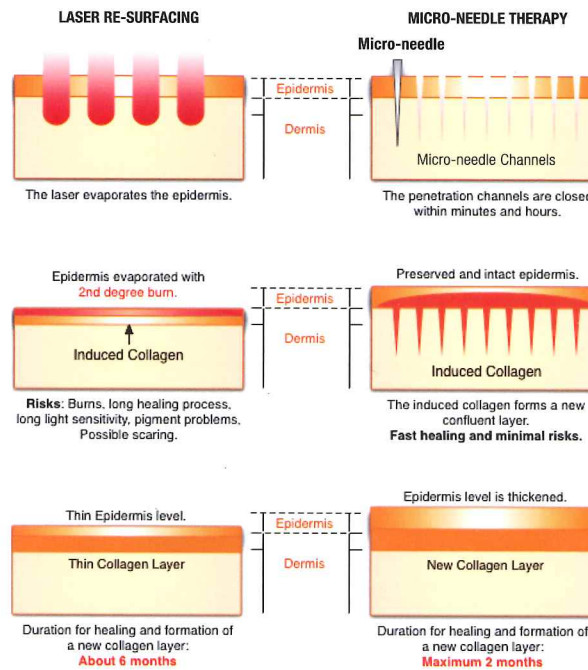

Moisture absorption into the skin

Dermal Roller SR™ uses 192 micro-needles to part the pores on the top layer of the skin without damaging them. The pores close approximately an hour after using the Roller, during which time your skin's ability to soak up the nutrients of skin creams and lotions will increase.

Dermal Roller SR™ is made from surgical steel from Japan of the highest quality medical grade stainless steel available. Our Dermal Roller SR™ also contains the smallest amount of nickel on the market, so incidents with allergy are almost impossible.

Dermal Roller SR™ has similar results to laser treatment, chemical peels and dermabrasion, but is considerably less invasive. It can be used on all skin types and even on sensitive areas such as around the eyes, the neck and hands. The epidermis and melanocytes in the skin are not damaged, thereby minimising the possibility of post-inflammatory hyperpigmentation. It can be used by both men and women.

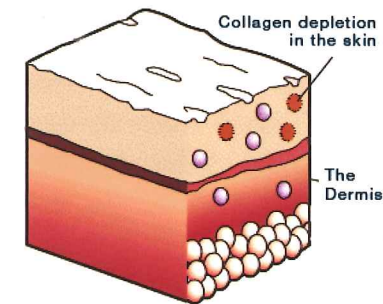

When using the Dermal Roller SR™, pinpoint punctures are made, which push the pores open temporarily. The body responds by initiating the healing process, releasing growth factors and triggering the production of collagen and elastin in the skin. By persistently triggering the healing process by using Dermal Roller SR™, the body continues to heal itself until the desired cosmetic level of skin repair is achieved.

Your practitioner will use a topical anaesthetic to numb the skin making the procedure comfortable; it will normally take up to 30 minutes for the topical anaesthetic to work and 20 - 30 minutes for the Micro-needle therapy procedure.

After use of the Dermal Roller SR™ your body will start to naturally regenerate and repair the skin, working below the surface in the dermis. This takes time as new collagen is formed, new skin cells are generated and blood supply is enhanced. It can take up to 6 weeks before visible signs of regeneration and repair are seen and the process will continue over the following months, providing you with a natural and long-lasting enhancement.

You will normally be recommended a series of three Dermal Roller SR™ procedures with approximately 6 weeks between them. In the treatment of acne scars and other types of scarring it may be necessary to have up to five procedures.

Immediately after the treatment you will look as you have moderate sunburn and your skin may feel warm and tighter than usual. This will start to subside after one to two hours and will normally recover within the same day with only slight redness the following day. Possible slight skin swelling will also usually subside in a day or two. Another side effect is a potential Retinoid
